

Clickable Prototype – Event Hub

Introduction :

This project focuses on creating an interactive prototype for an event booking application called Event Hub. The prototype was developed using Figma to simulate real user interactions and demonstrate the navigation flow between different screens.

Objective :

The objective of this project was to transform static UI designs into a functional and interactive prototype that allows users to experience the application's workflow before development.

Tools Used :

- Figma
- UI Design Components
- Interactive Prototyping Features

Prototype Screens :

1. Login Screen

The login screen allows users to enter their credentials and access the application.

2. Home Screen

The home screen displays featured events, categories, and event listings for users to explore.

3. Event Details Screen

This screen provides detailed information about a selected event, including date, time, location, and pricing.

4. Payment Screen

The payment screen allows users to enter registration details and proceed with event booking.

Navigation Flow

The prototype follows the following user journey:

Login Screen → Home Screen → Event Details Screen → Payment Screen

Navigation links were added between screens to simulate a real application experience.

Interactions Added

- Clickable Login button
- Event card navigation
- Register Now button interaction
- Back navigation between screens
- Screen transitions and animations

User Testing :

A quick usability test was conducted by navigating through the prototype and verifying that all buttons and navigation paths function correctly.

Feedback and Improvements :

The prototype provided a smooth navigation experience and maintained consistency across all screens. Future improvements may include additional screens, enhanced animations, and advanced user interactions.

Learning Outcome :

Through this project, I gained practical experience in:

- Interactive prototyping
- User flow design
- Navigation mapping
- Figma prototyping tools
- Usability testing

Conclusion :

The Event Hub interactive prototype successfully demonstrates the complete user journey from login to event registration. The project helped improve my understanding of designing and presenting interactive user experiences.
